Q3 2026 report

Published 1 October 2026 · Prepared by the Fernquill leadership team

Fernquill grew faster this quarter than in any quarter before. Most of that growth came from teams moving their contracts and reports from email into the portal.

Key numbers

MEASURE	Q2 2026	Q3 2026	CHANGE
Customers	6,820	8,140	+19%
Documents opened, per week	41,300	57,900	+40%
People on the team	96	118	+22
Support requests answered	412	538	+31%

Documents opened up 40% since June

What shipped

Forms were the biggest release. Every kind of field now fills in, checks its value and adds up totals, and the form designer turns any page into a form.

Annotations gained comments with replies and review states. Stamps can be made from anything drawn on the page, and text boxes keep their fonts, colours and line breaks in every app our customers open them in.

Under the hood, documents open faster: the first page of a 400-page file now shows in a third of the time it took in June.

What’s next

The new portal ships in November, with apps for iPhone and Android and a help centre that shows every feature step by step.

After the release we start on measurements and on organizing pages, the two features customers ask for most in support requests.

Thanks

Thank you to every customer who sent us feedback and bug reports this quarter, and to everyone at Fernquill who turned them into the work above.
