CDN maintenance on 4 November

Sent 20 October 2026 · To teams that load Lanternfield from cdn.lanternfield.example

On 4 November we move cdn.lanternfield.example to a new CDN. The toolkit's scripts keep their addresses, so most apps need no change.

Schedule

STEP	DATE	TIME (UTC)
Every version copied to the new CDN	3 November	All day
Traffic switched to the new CDN	4 November	07:00 to 08:00
Old CDN serves files read-only	4 to 18 November	All day
Old CDN switched off	18 November	09:00

Moved one hour earlier: the switch is now 06:00 to 07:00 UTC.

What to check

Apps that load a version range, such as `@3`, pick up the copy on the new CDN by themselves. Apps that pin one build by its hash should check that the hash still loads once the copy is done.

If your content security policy lists the CDN by its IP addresses rather than its name, add the new addresses from the status page before the switch.

Action needed only if you pin a build by its hash: check it after **3 November**.
